## (54) DIGITAL DATA PROCESSING DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a digital data processing device in which duplication of the first generation of digital data such as music and the like recorded in a recording medium such as a CD and the like is restricted by the number of times of duplication.

SOLUTION: A digital data recording control system 1000 reading out music data from a CD 1080 in which music data and ISRC to be used for discriminating its contents are recorded and recording (duplicating) the data in a SD card is provided with a recording number of times information storing section 1030 holding the number of times of recording of music data in a SD card by correlating them to ISRC, an upper limit information storing section 1050 storing information indicating the upper limit number of times of recording, and a recording authorization section 1020 which makes ISRC be read out from a CD by using a digital data read-out section 1010, and when the number of times of recording corresponding to the ISRC is less than an upper limit number of times, makes music data be read out, makes the music data be converted to a MP3 format by a record processing section 1070, and then makes the resultant data be recorded in a SD card 1090.
